Product short description:

Airmar 31-704-1-01 SS60 50/200 DST 20' Tilt Thru Hull Transducer with 5 Pin Female Connector

20' Tilted version for 16' to 24' hull deadrise

The SS60 is a 600 W 50/200 kHz transducer which integrates Airmar’s popular tilted element feature. Tilted element transducers have the ceramic element fixed at either a 20° 12° or 0° angle within the transducer housing. The transducer is installed almost flush to the hull and the tilted element corrects for the hull deadrise by orienting the beam directly down. This assures maximum echo returns to the transducer and more accurate depth readings.
