Product short description:

Airmar P7 600W 200BB Shorty Depth Transducer with 3 Pin Female Connector for Autohelm/Raymarine ST40 Instruments

The plastic P7 and P207 are part of our Shorty Series designed for boats with limited headroom. Compared with the P19 the P7 stem is 28 mm (1.10\") shorter for mounting in tight spots. The low-profile P7 model is nearly flush and minimizes drag with only 5 mm (3/16\") extending outside of the hull. The P207 mounts flush to the hull eliminating turbulence for exceptional high-speed echosounder performance.
