Product short description:

Airmar 41-442-1-03 R109LH Thru-Hull Transducer

The R109LH is a thru-hull 2 kW transducer which delivers excellent target resolution bottom discrimination and bait and game fish separation. The R109LH is packed with a fifteen element low-frequency array that operates at anywhere between 38 kHz and 75 kHz which delivers great depth capabilities out to 6000'.

The single high-frequency ceramic operates at any frequency between 130 kHz and 210 kHz and has narrow 8° to 4° beams that provide tremendous bottom detail and fish target discrimination at depths to 1500'.
