Product short description:

The SS60 is a 600 W 50/200 kHz transducer which integrates Airmar’s popular Tilted Element feature. The transducer is installed almost flush to the hull and the tilt of the element corrects for the hull deadrise by orienting the beam directly down. This ensures maximum echo returns to the transducer and more accurate depth readings.

12° tilted version for 8° to 15° hull deadrise
