Product short description:

Airmar 31-256-2-42 ST300 Plastic Thru Hull Shorty Speed & Tempreture Tranducer - No Connector

The ST300 speed and temperature sensor is low in price and short in size. As part of our Shorty™ Series it is designed for boats with limited headroom. The P371 low-profile housing option is nearly flush and minimizes drag with only 5 mm (2/10\") extending outside of the hull. The P398 countersunk housing mounts flush eliminating turbulence for more accurate speed readings.
