Garmin Airmar DT800 20° Tilt NMEA 2000 Thru-Hull Transducer

Product price:

£359.99 tax included

Product codes:

Reference: 230-0101110500
EAN13: 00753759079239
UPC: - MPN: 010-11105-00

Product short description:

Garmin 010-11105-00 Airmar DT800 Smart Sensor 20 Degree

20° Tilted version for 16° - 24° hull deadrise

The DT800 utilizes Airmar’s proven Tilted Element and broadband technologies in this thru-hull depth and temperature Smart Sensor. The DT800 is a low-profile retractable thru-hull sensor that computes accurate depth and temperature data and sends it to any NMEA 0183 or NMEA2000 display or network. Airmar's Smart Sensors have embedded microelectronics - the transducer element and signal processor are only millimeters apart. The signal from the depth transducer is processed right inside the sensor itself. All that is needed to receive depth and temperature data is a single cable into a compatible network or display.
