EAN13: 00753759256227
UPC: - MPN: 010-13007-00

Product short description:

Use the Garmin GNA 10 to connect a jog lever to Reactor 40 autopilots on displacement hull boats. A jog lever is a rugged and simple steering control for work boats or trawlers. Adjust heading hold with the jog lever by pressing it right or left or put the autopilot into the new Power Steering mode to move the rudder without autopilot guidance. The GNA 10 can also optionally connect to a button and LED light to allow switching between heading hold and standby.

Note: Garmin does not supply the jog lever button or LED light. Requires a compatible Garmin autopilot and Garmin MFD. Suitable for displacement hull power boats only.
