Garmin GNX Wireless Wind Pack

Product price:

£820.00 tax included

Product codes:

Reference: 230-0100161610
EAN13: 00753759157869
UPC: - MPN: 010-01616-10

Product short description:

When you have a GNX Wind instrument combined with a gWind Wireless 2 transducer you'll know what's going on with the wind.

GNX Wind Instrument - GNX Wind gives you the wind data necessary to make confident decisions. Featuring a high-visibility glass-bonded backlit monochrome LCD display with customisable backlight colours GNX Wind interfaces through the NMEA 2000® network to show 2 data fields and a digital wind rose simultaneously to display true* and apparent wind data steering guidance boat speed and more. Low power consumption of 350 mW daylight (no backlight) and 400 mW night-time (mid-level backlight) is perfect for sailboats. Customisable user settings allow you to configure the screen layout to your preferred setting. Display configurations include more than 15 important marine parameters for wind speed and navigation. It can even wirelessly connect to a quatix® 3 GPS marine smartwatch

via ANT® technology to stream wind data directly to your wrist.

gWind Wireless 2 Transducer - gWind Wireless 2 offers an easy-to-install solution that eliminates running wires through masts up to 15 m (50 ft.). Accurate wind signals are sent via an ANT connection directly to a GNX Wind instrument or to a compatible Garmin GPSMAP® chartplotter. The transducer features renowned Nexus® twin-fin technology with a 3-bladed propeller providing accurate wind speed and stable wind angle in lighter wind conditions. Also available in a wide selection of Wind and Sail Packs (sold separately) that can be used as standalone wind systems or expanded to full network systems via NMEA 2000.

* For true wind information speed through the water and heading inputs are required.

In The Box

gWind™ Wireless 2 transducer GNX™ Wind instrument and documentation.
