Maretron Fuel Flow Monitor

Product price:

£425.00 tax included

Product codes:

Reference: 468-FFM100-01
EAN13: 00873804003276
UPC: - MPN: FFM100-01

Product short description:

FFM100 converts a variety of flow senders (e.g. fuel water etc.) to NMEA 2000® Network Data.

All flow senders ordered separately depending on application (i.e. single fuel flow sender for gas engine dual fuel flow senders for diesel engine water flow sender for sea water etc.).

Fuel flow senders facilitates fuel consumption optimization for reduced fuel operating cost.

Fuel flow senders use positive displacement metering technology for superior accuracy over other measurement technology such as turbine meters.

Fuel flow senders do not require costly fuel conditioning components like flow straighteners and pulse dampers.

Fuel flow senders implement true temperature compensation with precision built-in thermistors

for increased accuracy.

Fuel flow senders automatically detect reverse flow due to fluctuating pressure difference from injection pumps.

Fuel flow senders pass particle sizes up to 70 micrometres (diesel fuel filters normally filter down to 2 micrometres to prevent clogging injectors).
