Product short description:

Airmar 41-456-2-01 B258 1KW 50/200 Transducer with Humminbird 9 Pin Connector

(No fairing block included)

The B258 is an excellent economical 1 kW dual frequency transducer for anglers. Its unique four ceramic element construction produces an elliptical beam pattern that covers a wider area and produces excellent target resolution. The combination of 200 kHz and 50 kHz make it a great option for both shallow and deep water use. The included high-performance fairing provides excellent performance at speeds up to 30 knots (34 MPH).
