Product short description:

Airmar 31-272-9-01 B45 600W 50/200 Thru-Hull Transducer With 5 Pin Male Connector

Includes fairing block

The B45 is Airmar's smallest and most economical dual-frequency bronze stem transducer. Its streamlined shape deflects aerated water from the transducer's face for strong return echoes and clear display images. An Airmar High-Performance Fairing is recommended for all installations to get the best possible results.
