Product short description:

Airmar 31-664-2-02 B744VL 50/200 Thru Hull DST Transducer with Furuno 10 Pin Female Connector

The B744VL is a TRIDUCER® Multisensor featuring depth speed and temperature in a single housing. The 50/200 kHz dual-frequency single ceramic element provides great target detail in shallow water at 200 kHz and good deep-water bottom tracking at 50 kHz. The B744VL’s extended stem-length has the extra height needed for steep-deadrise vessels or thick cored hulls.
