Product short description:

Airmar 35-004-1-41 DST800 P17 Transducer With Spade Connectors for Raymarine/Autohelm

Fits Raymarine/Autohelm ST60 40 30 Raydata & QT206 Instruments

The DST800 is a Smart™ TRIDUCER® Multisensor that offers depth speed and temperature functions in one compact thru-hull fitting. Digital signal processing inside the housing provides depth speed and temperature data to a chart plotter radar screen or digital display eliminating the need for a dedicated depth sounder. One hole in the boat's hull makes this TRIDUCER® Multisensor attractive to both boat builders and boat owners. And the retractable multisensor is available with NMEA 0183 NMEA 2000® or custom CAN protocols. The wide port-

starboard fan shaped beam is able to find bottom even when installed on high-deadrise hulls or on sailboats when heeled.
