Product short description:

Airmar 44-168-1-01 ST800 P120 Speed & Tempreture Smart Sensor NMEA 2000

The ST800 speed and temperature sensor processes a digital signal inside the housing. Then this Smart™ Sensor sends the data to a chart plotter radar screen or digital display in either analog or NMEA2000® formats. These low-profile units are nearly flush and minimize drag with only 5 mm (3/16\") extending outside of the hull.
