Product short description:

Airmar 31-487-5-01 ST800 P120 Thru Hull ST Sensor No Connector

The ST850/800 is an analog retractable speed and temperature sensor. The sensor fits inside a low profile plastic thru hull housing that is nearly flush to the hull with only 5 mm (3/16”) extending outside of the hull. The housing has a valve assembly that helps to minimize water ingress in the bilge when the sensor is removed for routine maintenance of the paddlewheel.
