UPC: - MPN: T70544

Product short description:

RVM-400 series stainless steel all-in-one through hull transducer brings the power and clarity of RealVision MAX technology to inboard and outboard powerboats. The RVM-400 series transducers are compatible with the RVM1600 sonar module and Axiom 2 Pro RVM chartplotters.

The RVM-420 is a port and starboard transducer pair designed for boats with 15° to 25° of deadrise. Each transducer element is tilted at 20° to compensate for the hull deadrise.
